

RMFI Manufacturing

Humanoid Robot Industry — Contract Manufacturing Prospect List

Prepared: June 2026 | Confidential — Internal Sales Use

WHY THIS SECTOR — WHY NOW

Humanoid robots crossed from R&D into production in 2026. Figure AI's factory is producing one robot per hour. Boston Dynamics began shipping its electric Atlas. Tesla is targeting mass production of Optimus. Every one of these robots requires precision-machined joints, actuators, housings, frames, and structural components — the kind of work RMFI does.

The companies building their own machine shops are protecting proprietary core designs. Standard structural parts, enclosures, brackets, and non-proprietary components get outsourced. **That is the opening.**

TIER 1 — IN PRODUCTION (Highest Priority)

1. Figure AI

Product: Figure 02 / Figure 03 humanoid robot
Status: BotQ factory at 1 robot/hour as of June 2026
HQ: Sunnyvale, CA
Needs from RMFI: Precision machined aluminum/titanium joints, structural frames, motor housings
Note: Backed by NVIDIA, Microsoft, Bezos; \$39B valuation; BMW pilot underway
Procurement: figure.ai/contact

2. Boston Dynamics (Hyundai)

Product: Electric Atlas humanoid; Spot quadruped
Status: Shipping Atlas units to Hyundai plants and Google DeepMind (2026)
HQ: Waltham, MA
Needs from RMFI: High-tolerance machined parts, actuator components, structural assemblies
Note: Hyundai targeting 30,000 units/year by 2028 — volume is coming fast
Procurement: bostondynamics.com/company/contact

3. Tesla — Optimus Program

Product: Optimus Gen 2 / Gen 3 humanoid robot
Status: Autonomous operation in Tesla factories; Gen 3 targeting summer 2026
HQ: Austin, TX / Fremont, CA
Needs from RMFI: Actuators, precision gearboxes, structural components
Note: Musk projects Optimus could be Tesla's largest revenue source long-term
Procurement: tesla.com/supplier

4. Agility Robotics

Product: Digit — first humanoid deployed commercially in warehouses

Status: Running at Toyota facility (Canada) and Amazon warehouse pilots

HQ: Albany, OR | Austin, TX (HQ)

Needs from RMFI: Precision leg/arm joints, titanium structural parts, custom fabrication

Note: Robot-as-a-Service model means recurring fleet expansion orders

Procurement: agilityrobotics.com/contact

TIER 2 — SCALING UP (Near-Term Pipeline)

Company	Product	HQ	Status	Contact
5. Apptronik	Apollo humanoid	Austin, TX	GXO Logistics + NASA pilots	apptronik.com/contact
6. 1X Technologies	NEO home / EVE industrial humanoid	San Jose, CA (US ops)	Pre-orders open; manufacturing scaled up	1xtechnologies.com/contact
7. Sanctuary AI	Phoenix humanoid	Vancouver, BC	Automotive and retail pilots	sanctuary.ai/contact

TIER 3 — DEFENSE ROBOTICS (US Manufacturing Required by Contract)

Defense contracts require domestic manufacturing. This eliminates overseas competition and is a natural fit for US-certified machine shops.

Company	Product	HQ	Status	Contact
8. Anduril Industries	Autonomous defense systems, Orion/Leviathan vehicles	Costa Mesa, CA	Active DoD contracts; Golden Breeze partner	anduril.com/contact
9. Ghost Robotics	Vision 60 quadruped (US Air Force deployed)	Philadelphia, PA	Active military base deployment	ghostrobotics.io/contact
10. Sarcos Technology	Guardian XO exoskeleton; Guardian XO-CR exoskeleton	San Diego, CA	Industrial + defense deployment	sarcos.com/contact

COMPONENT / SUBSYSTEM MAKERS (Supplier-to-Supplier Opportunities)

These companies make parts that go INTO robots and often need outside machining for volume production.

Company	What They Make	HQ	RMFI Opportunity
Harmonic Drive Systems	Precision strain wave gearboxes (in every robot joint)	Beverly Hills, CA	High-tolerance machined gearbox housings
Symbolic (SYM)	Warehouse automation robots	Wilmington, MA	Structural frames, enclosures at volume
Teradyne / Universal Robots	Collaborative robot arms	N. Reading, MA	Arm link machining, joint components
Cognex (CGNX)	Machine vision systems	Natick, MA	Precision housings for industrial cameras

WHAT TO LEAD WITH IN SALES CALLS

- Tolerances you can hold** — robot joints require ±0.001" or tighter on mating surfaces

Materials experience — 6061/7075 aluminum, titanium 6Al-4V, 17-4 stainless are the common robot alloys

Prototype-to-production capability — the shop that handles prototypes often gets the production order

AS9100 / ISO 9001 certification — defense robotics especially requires certified quality systems

Lead time — robot companies are scaling quickly and hate supply chain delays

US-based manufacturing — defense contracts require it; eliminates overseas competitors

BOTTOM LINE

The humanoid robot industry is at the same stage the EV industry was in 2018-2019 — past proof-of-concept, entering production scale-up, supply chain not yet locked in. The machine shops that get qualified NOW will be in the supply chain for the next decade. **The window to get on approved vendor lists before the big orders come is 2026–2027.**

Research compiled June 2026. Company details subject to change — verify procurement contacts directly.
